

NILESH DAS

Bengaluru, Karnataka |  | dasnilesh832@gmail.com | +91 7847859871 | 

SUMMARY

Software Developer experienced in engineering scalable, end-to-end systems from scratch. Proficient in Java 8/17/21, Spring Boot, and React, with hands-on AWS S3 integration. A collaborative team player thriving in agile environments, prioritizing clean architecture, thread-safe code, and full ownership of low-latency product delivery.

EDUCATION

Trident Academy of Creative Technology Master of Computer Applications CGPA: 8.95	Bhubaneswar, Odisha 2023-2025
Fakir Mohan University Bachelor of Science in Physics CGPA:8.26	Balasore, Odisha 2020-2023

SKILLS

Programming Languages: Java (Core & Advanced), SQL, C	Framework and Java Technologies: Spring Boot, REST APIs, JDBC
Front-end Technology: React, HTML, CSS, JavaScript	Tools and Build: Git, GitHub, Linux, Postman, AWS S3, IntelliJ IDEA, Eclipse
Methodologies: Agile, CI/CD, Object-Oriented Design	Languages: English, Hindi
Testing and Logging: Junit, Log4j2	Soft Skills: Problem-Solving, Fast Learner

PROJECTS

Full-Stack Billing & Inventory POS System | Sep 2025 – Jan 2026

- **Engineered** a RESTful web application using Spring Boot and Java 21, implementing Spring Data JPA for processing high-concurrency inventory transactions with sub-200ms latency.
- **Leveraged** Spring Security to protect 100% end points and Role-Based Access Control (RBAC), alongside global CORS configurations, to prevent and unauthorized access.
- **Constructed** transactional payment gateways featuring cryptographic signature verification and automated receipt generation for zero-discrepancy financial settlements.
- **Integrated** cloud object storage to offload static media, boosting overall application throughput and reducing server load by ~40%.
- **Structured** normalized relational schemas with ACID-compliant transaction management to guarantee strict data integrity.
- **Tech Stack:** Java (21), Spring Boot, React, Context API, Axios, Bootstrap, MySQL, AWS S3, Razorpay, JWT.

Expo-Fino Tracker | Feb 2026 – March 2026

- **Architected** secure RESTful APIs utilizing Spring Boot and Spring Data JPA to seamlessly process real-time financial transactions, including income, expenses, and recurring budgets.
- **Configured** robust user authentication and authorization pipelines using Spring Security and JWT, integrating bcrypt password hashing to guarantee strict data privacy.
- **Built** a dynamic, responsive frontend using HTML, CSS, and asynchronous JavaScript (Fetch API) to provide users with interactive budget progress indicators and transaction filtering.
- **Tech Stack:** Java, Spring Boot, Spring Data JPA, Spring Security, JWT, REST APIs, MySQL, HTML, CSS, JavaScript, Git

Employee Leave Management System | Jan 2025 – Apr 2025

- Automated internal HR workflows by transitioning manual tracking to a centralized digital solution.
- Designed a responsive user interface enabling staff to seamlessly submit time-off requests and monitor approval pipelines.
- Optimized NoSQL database queries to support real-time administrative dashboard updates and maintain system reliability.
- Maintained data integrity using **MongoDB**, optimizing database queries to support real-time dashboard updates for administration teams.
- **Tech Stack:** Backend: Node.js, Express.js, React.js, MongoDB, Postman, Git.

ACHIEVEMENTS

- **Smart India Hackathon (SIH) 2024:** Selected to advance in a highly competitive national hackathon, cultivating rapid, collaborative problem-solving skills under strict development deadlines.
- **Algorithmic Problem Solving:** Authored complex Data Structures & Algorithms solutions on LeetCode and HackerRank, accumulating 1,000+ community views and engaging 20+ developers in collaborative learning.
- **Community Leadership:** Orchestrated technical workshops as an Internshala Student Partner, driving a 10% increase in platform registrations across the campus community.
