Portfolio: <https://nilesh-das.vercel.app/> | Location: [Bangalore, India]

PROFESSIONAL SUMMARY

Software Engineer with 3.7 years of experience developing scalable backend services using Java, Spring Boot, Microservices, and REST APIs across retail and hospitality platforms. Experienced in building product catalog, search, hotel availability, and reservation workflows with Apache Kafka, Redis, MySQL, and MongoDB. Hands-on with asynchronous service communication, API contract design, query optimization, Dockerized deployments, AWS environments, Jenkins CI/CD, and production troubleshooting. Strong understanding of backend service design, database performance, API reliability, and clean development practices.

TECHNICAL SKILLS

Languages: Core Java, Java 8+, OOP, Collections, Multithreading, Stream API, Lambda Expressions

Frameworks: Spring Boot, Spring MVC, Spring Framework, Spring Data JPA, Hibernate, JPA

Microservices & API Development: Microservices, REST APIs, RESTful Web Services, API Design, Inter-Service Communication, DTO Mapping

Messaging & Caching: Apache Kafka, Event-Driven Architecture, Asynchronous Processing, Redis, Caching Strategies

Databases: MySQL, SQL, MongoDB, Database Indexing, Query Optimization

Cloud & DevOps: AWS, EC2, S3, Docker, Jenkins, CI/CD, Git, Maven

Testing & Tools: JUnit 5, Mockito, Postman, Swagger, OpenAPI, Logback, SonarQube, IntelliJ IDEA, Jira

Development & API Tools: Postman, Swagger, OpenAPI, Logback, IntelliJ IDEA, Eclipse, Jira, Production Debugging

PROFESSIONAL EXPERIENCE

TapQwik Software Private Limited

Feb 2023 – Present

Software Engineer

- Developed Java and Spring Boot backend services for Samsung commerce and Expedia hospitality workflows.
- Built REST APIs supporting product search, catalog operations, hotel availability, and reservation processes.
- Implemented Redis caching for frequently accessed search results, catalog information, and hotel availability data.
- Integrated Kafka producers and consumers for asynchronous catalog synchronization and booking-related events.
- Optimized MySQL and MongoDB data-access operations through query refinement, indexing, and efficient retrieval patterns.
- Designed API contracts with DTO mapping, request validation, standardized responses, and exception handling.
- Supported Docker-based application packaging, AWS deployments, and Jenkins CI/CD validation.
- Investigated production issues involving booking failures, synchronization delays, API latency, and data inconsistencies.
- Maintained Swagger/OpenAPI specifications and performed endpoint validation using Postman.

KEY PROJECTS

Samsung — Digital Commerce & Product Catalog Platform · Retail · Catalog & Search

Tech Stack: Java 8+, Spring Boot, Hibernate, Kafka, MySQL, MongoDB, Redis, AWS, Docker, Jenkins, JUnit, Swagger

Samsung — Digital Commerce & Product Catalog Platform is a Java Spring Boot microservices solution supporting product discovery, category navigation, search, filtering, and catalog synchronization. REST APIs handle customer-facing catalog operations, while Kafka supports asynchronous updates and Redis improves frequently accessed search and catalog responses.

Roles & Responsibilities

- Developed Spring Boot services for product listing, category navigation, search, filtering, and product-detail operations.
- Designed REST APIs with DTO mapping, validation, pagination, filtering, and standardized exception handling.
- Implemented JPA/Hibernate mappings for product and catalog-related entities.
- Integrated Kafka producers and consumers for catalog-update events and downstream synchronization.
- Applied Redis caching to search results and frequently requested product information.
- Optimized MySQL queries and indexes for catalog retrieval and search-related operations.
- Used MongoDB for flexible product metadata and document-oriented catalog information.

- Supported Docker packaging, AWS deployments, and Jenkins CI/CD activities.
- Performed API validation and troubleshooting using Postman, application logs, and SQL analysis.

Key Achievements

- Improved catalog and search API responsiveness through Redis caching and MySQL query/index optimization.
- Increased reliability of asynchronous catalog synchronization by refining Kafka event handling and validation logic.

Expedia — Hotel Booking & Reservation Management · Travel · Hotel Booking

Tech Stack: Java 8+, Spring Boot, Hibernate, Kafka, MySQL, Redis, Docker, AWS, Jenkins, Git, Postman

Postman

Expedia — Hotel Booking & Reservation Management is a Java-based backend platform supporting hotel discovery, room availability, reservation creation, and cancellation. Spring Boot microservices expose REST APIs, Kafka handles asynchronous booking events, Redis accelerates availability lookups, and MySQL/MongoDB support transactional and flexible application data.

Business Workflow

Hotel Search → Property Selection → Room Availability → Rate Selection → Guest Details → Reservation Creation → Confirmation → Cancellation

Roles & Responsibilities

- Developed backend services for hotel search, property details, room availability, reservation creation, and cancellation.
- Created REST APIs with validation, DTO conversion, pagination, filtering, and consistent error handling.
- Implemented JPA/Hibernate persistence for hotel, room, rate, guest, and reservation-related entities.
- Integrated Kafka producers and consumers for reservation events and asynchronous status processing.
- Used Redis caching for frequently requested hotel, room, rate, and availability information.
- Optimized MySQL queries and indexes for search, availability, booking, and reservation-history operations.
- Supported MongoDB for flexible hotel and property metadata.
- Assisted Docker packaging, AWS deployments, and Jenkins CI/CD release activities.
- Validated APIs using Postman and investigated booking issues through logs, SQL analysis, and backend debugging.

Key Achievements

- Reduced response time for frequently accessed hotel and availability APIs through Redis caching and database optimization.
- Improved reservation workflow stability by strengthening Kafka event handling, API validation, and backend error management.

EDUCATION

B.Sc. | Fakir Mohan University, Balasore, Odisha | 8.26 CGPA (Grade A) | Pass-out Year: 2023

SOFT SKILLS

Ownership, Communication, Problem Solving, Team Collaboration, Continuous Learning, Analytical Thinking, Adaptability, Debugging Mindset
